Our business

Trade in Iran has a historical background.

Today, our country has extraordinary conditions in terms of geography, transit and strategic regional position.

Iran's convenient geographical location speeds up the transfer of goods and communications, and this speed and time-saving trade is invaluable. Iran is in the middle of the world. As a result, we can deliver goods faster than European countries. Central Asian countries can also easily receive our export goods. So Iran's first advantage in trade with the world is that this land has a strategic position in the Middle East.

Another and very important advantage of Iran's exports, compared to other countries, is the very low cost of labor wages. The more this cost is effective in the cost of goods, the more competitive advantage that product has in the export market.

Attention to non-oil exports and effective measures to improve and create added value need to create a competitive environment to promote it. Production of goods and services are competitive if they are offered at a more reasonable price and higher quality compared to similar goods and services in other countries, which fortunately these conditions are provided in Iran.

World Gemstone Mining and Processing Industry:

The gemstone mining and processing industry has accounted for a significant share of world trade and has been exploited around the world for many years and has reached a high profitability stage. All countries of the world generate income from this industry and by combining it with the jewelry industry, they have been able to bring good performance to their country's economy.

Today, the extraction, processing and export of precious stones is an important part of the economies of countries such as Brazil, Colombia, South Africa, Australia, Burma, Sri Lanka, Thailand, China, India, European countries, the United States and many other countries.

In general, African countries are mainly exporters of raw gemstones and European countries are mostly importers of these gemstones and producers of artificial gemstones, and many Asian countries are exporters of gemstones and most Arab countries are importers of their final products.

Gemstone Mining and Processing Industry in Iran:

The historical background of the industry of extraction and processing of gems and precious stones in Iran dates back to BC. Archaeological evidence shows that in the first civilizations of this region, precious stones had a special doctrinal and economic status, so that the beauty and rarity of these minerals, had increased their importance to some extent.

Today, the importance of the global market for precious stones is such that in most countries of the world, specialists in this field are trained in special academic circles called gemology.

According to the evidence obtained from the second to the eleventh centuries AH (which is about 35 books in the field of precious stones science), it can be safely said that the founder of gemology or the science of gemstones in the world of scientists There Were Iranian Muslims such as Jaber ibn Nahyan, Tusi, Abu Rihan al-Biruni and Sheikh Ahmad Safawi. And today, the relics of Iranian artists of that period, which are decorated with beautiful Persian calligraphy or Quranic verses, are kept in world-famous museums. Iran is one of the mining countries and is also the third largest producer of decorative stones and has a brilliant history in this field.

Out of 100 types of stones in the world, 50 types are in Iranian mines.

Gemstones are found in different types and varieties in our country's market, each of which is different in terms of appearance, price and producing mine. These stones are

often known as precious stones in the markets due to their excellent material and rarity. The most famous and popular type of precious stone in our country is turquoise stone with chemical formula:

$\text{CuAl}_6 [(\text{OH})_2 - \text{PO}_4] 4.4\text{H}_2\text{O}$, which in addition to domestic sales, has been able to keep pace with global markets, and the amount of turquoise extraction in it shows a significant number.

In Iran, for centuries, turquoise stone has been widely used in this country to decorate objects, mosques and inside and outside many important spaces. This method of Iranian construction was introduced to a region such as the Indian subcontinent many years later, and turquoise was also used in the construction of the Taj Mahal.

The most suitable areas in terms of climatic conditions for the formation of this stone are hot and dry areas. The stone is commonly found in areas where rocks have been left over from volcanic activity or where global warming has interfered. The attractive and blue color of this magnificent stone is due to the presence of copper. If this stone is mined in an area where the amount of copper in the mines is higher, its blue will be more inclined to a light blue color. Generally, the change in color of turquoise from blue to green is due to the loss of water in the stone over time.

The reason for the difference in the colors of turquoise stone is due to the ratio of iron to copper. Also, the process of creating this beautiful rock requires many years of time and exists only in a handful of regions of the earth.

Different types of turquoise stones are mined and exploited. In addition to beauty, turquoise stone has many healing properties. This precious stone is very effective for the physical and mental health of human beings, which is why it has become very popular among the people.

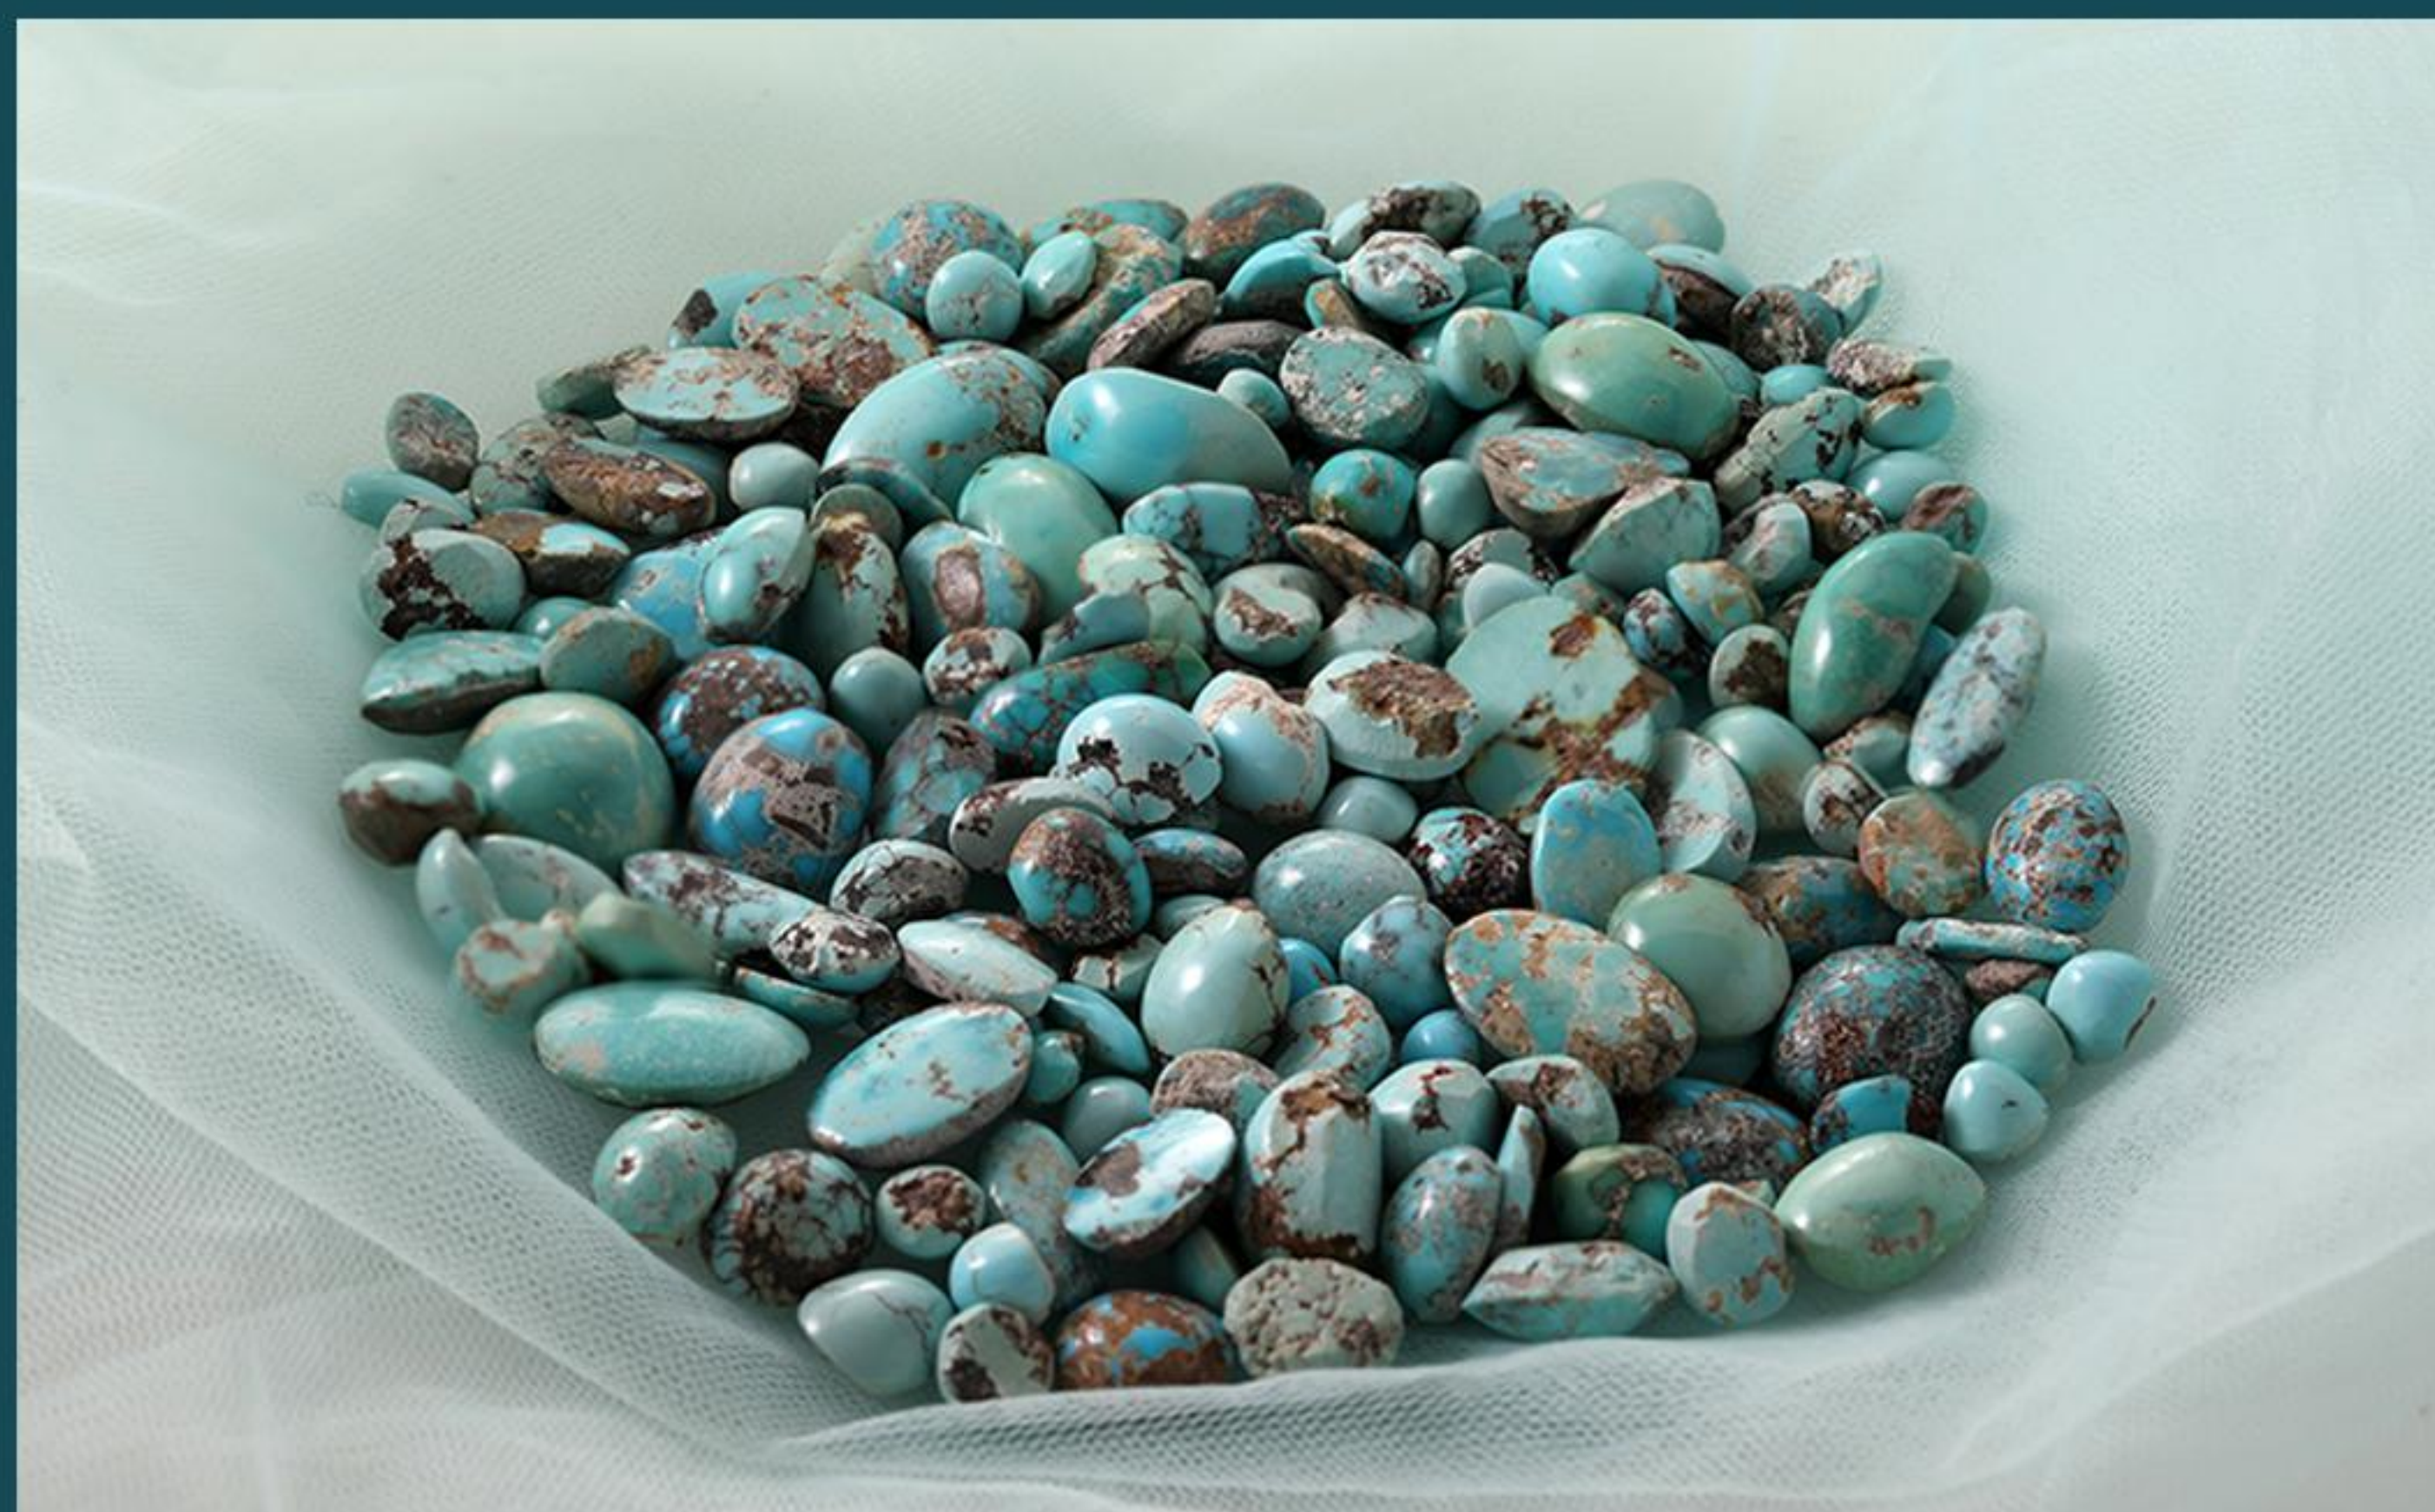

Turquoise has almost all the healing and psychological properties of other stones and is suitable for all seven chakras.

As mentioned, turquoise is a rare stone that can be found in certain mines around the world. Currently, many people are working in the field of preparing export turquoise jewels.

Among the turquoise mines in the world, we can mention the mines of countries such as Iran, Germany, USA, Tibet, India, Egypt and China, which is the best type of turquoise found in Iran, although turquoises from different parts of the world are similar in appearance. They are the same, but they differ in color and purity.

Due to its amazing beauty, turquoise is exported to European countries, the United States and Turkey, as well as to the Muslim countries of the Persian Gulf, and Japan, France, Italy, Malaysia, Indonesia, and Afghanistan are also very interested in using turquoise for use in silver. And we have a significant amount of turquoise exports annually. Italy is one of the countries that has made significant progress in the jewelry industry and is a leader in this field. It is very demanding of this stone.

The market for the sale and export of Ajami turquoise ring in the Arab countries and the

Persian Gulf has been more prosperous than other countries, so that it has the largest market share of this ring in the world.

According to the US Geological Survey and the UK Geological Survey, Iran is the world's largest producer of turquoise.

Turquoise stone was first discovered in Iran and is one of the oldest stones that has been with us throughout history and is one of the oldest stones in the world.

With years of experience in the field of turquoise exports, Iran has been able to attract the attention of many buyers in the world market. Also, as the leading major exporter of original turquoise, it exports the best and highest quality turquoise jewels at reasonable prices to other countries of the world. Most of these beautiful and stylish stones are exported to other parts of the world by the country's top trading companies and manufacturers. At present, all kinds of turquoise jewels are produced in our country for export. Which has different uses in decorating various items and producing all kinds of ornaments, and another application of this stone is used in all kinds of important and historical buildings and facades or pilgrimages.

It is interesting to know that the largest turquoise stone in the world is used in many industries for the production of decorative rings, decorative stone production factories, ceramic and tile production factories, facade stone production workshops, etc. All of these issues indicate the application and Turquoise is of great importance in the manufacturing industry.

In the following, we will name the types of turquoise, which are as follows:

- Ajami turquoise stone
- Shajari Turquoise Stone

There are veins similar to the leaves of trees on the turquoise, which is why it is called shajari turquoise.

Regarding the most important characteristics of Shajari turquoise, it can be said that the more these veins are on turquoise and the closer it is to the foliage of trees, the higher its price will be.

The variety of turquoises in terms of color, shape, and minerals that are extracted from there is high and has a color range between green to blue.

The quality of the exported shajari turquoise gem is very high, with those blue or green streaks that can be seen as a grid on it.

These turquoises are polished in the best possible way. Also, the hardness index in them usually shows between 5.5 and 6, and when it is completely dry, its strength and degree of strength increase.

Ajami turquoise is the only valuable and expensive turquoise in the world that is found only in Iranian mines.

This type of turquoise is one of the best and most expensive types of turquoise for making ring jewels, which in relation to its unique features, we can point to more beauty and attractiveness, higher quality and quality in terms of formability and design.

Ajami turquoise differs from each other due to factors such as quality, color spectrum, brightness and gloss, percentage of purity, weight and shape.

Due to the existence of large turquoise mines in Iran and its extensive mining, the major production of export AJAMI and SHAJARI turquoise gem is pursued with the efforts and perseverance of our country's producers. Utilizing advanced tools and equipment in this field with the help of jewelers and people who have expertise in this field has come to finally deliver a great structure in every way to customers.

Known and exploitable turquoise mines are very rare in nature that are found in Iran in the mines of Khorasan Razavi, Damghan, Kerman, Yazd, Quchan and Azerbaijan, the purest of which is the Neishabour turquoise mine in Khorasan Razavi.

"Khorasan Razavi: the cradle of Iranian precious stones"

In Iran, various types of precious and semi-precious stones have been discovered, 22 of which belong to Khorasan Razavi.

Existence of several precious and semi-precious stone mines in Khorasan caused the city of Mashhad to be selected as the world city of gemstones.

Razavi Khorasan has valuable stone and jewelry mines, some of which, including "Turquoise", have gained worldwide fame.

9 countries in the world have turquoise mine, but the highest quality turquoise in the world belongs to Neishabour mine.

The quality of Neishabour turquoise has been recognized since the time of the Persians and their intense color is very noticeable. This relatively delicate stone can be cut into many different shapes. It is sometimes even engraved or sculpted. Also, the production of small Iranian turquoises is used in enameling.

The largest, richest and highest quality turquoise mine in the world is located in the heart of Ali Mirzai mountains of turquoise mine village. This mine is the oldest active mine in the world and archaeological evidence shows that there are remnants of turquoise mining from 6700 years ago. Although many of the old mines were abandoned after extraction, the Turquoise Mine is still active and mining remains and tunnels remain.

50 km of tunnel inside 15 floors has made this mine the largest turquoise mine in the world.

According to estimates, this mine has 9000 tons of mineral reserves, and considering that 40 tons of turquoise is extracted from this mine annually, it seems that this mine can be kept active for another 200 years.

There are about 170 employees of the mine who are shareholders of this company and most of them live in the villages around the mine, and the harvest from the mine varies from about 100 kg to 150 kg per day.

The method of digging a tunnel in a turquoise mine is using dynamite and blasting it, because it is not possible to extract turquoise streams from a mine without blasting,

and basically digging any mine in the whole world is not cost-effective except using blasting methods.

After the explosion, the workers apply "sepretad-turquoise", meaning that they separate the turquoise from the rubble. In this method, the shell that surrounds the turquoise around the mother stone is removed using a hammer.

Workers find a turquoise in the stones by hammering them and listening to their sound, and this method is not applicable anywhere in the world and depends only on the experience and expertise of people in this field.

20,000 people in the cities of Mashhad and Neishabour are active in the turquoise industry and jewelry making.

Finally, the extracted turquoise, after a journey from the depths of the mine, becomes a jewel and is available to everyone and goes through the export process.

And among other cities in Iran with turquoise mine, we can mention the city of Kerman. Kerman turquoise is another type of turquoise in Iran, which is located in Kerman province, 42 km northeast of Babak city and 132 km northwest of Sarcheshmeh copper mine.

In the city of Babak, you can see very beautiful and diverse examples of turquoise. It can be said that one of the main sources of turquoise is Babak city in Kerman province. The color of this turquoise is usually duller than Neishabour turquoise. The polish and its quality is less than Neishabour turquoise. For this reason, when viewing these stones,

their differences are easily clear.

Therefore, you can easily distinguish Neishabour turquoise from Kerman turquoise when buying this product. It can also be said that Neishabour turquoise has more shine than Kerman turquoise, which doubles the beauty of this stone.

Turquoise mine of Babak city in Kerman province is another main reservoir of this precious stone from which quality turquoise is extracted due to the type of climate and conditions of formation of this stone in these two regions. Kerman Ajami turquoise is more fragile and has less strength than its Neyshabur types.

Due to the high quality of this product, it is mostly for export.

Turquoise of Babak city has a very wide color spectrum. This stone is available in dark blue, light blue to bright green colors. The darker the blue in turquoise, the greater the value of turquoise.

The appearance of turquoise in Babak city is of two types: Ajami and Shajari. Some turquoises have streaks and fractures, while others have a perfectly smooth blue surface. The most important point about the original turquoise of Kerman that you should pay attention to is that the surface of this turquoise is not hard at all and has a completely soft surface.

You should also know that this type of turquoise is a little thicker than Neishabour turquoise.

Since Kerman turquoise stone has fragility, resin is used to increase the strength of this

gem. This resin makes the turquoise color of Kerman shinier.

Another point about the price of this product. Although Kerman turquoise is also one of the most expensive turquoises, but it has a lower price compared to Neishabour turquoise.

And finally, we have the turquoise of Damghan city, which is one of the old mines of Damghan turquoise mine, which is very popular.

Damghan Turquoise Due to its thinness, usually the back of the jewel is filled with soil or mud so that they can stick it on wood and cut it, and the color and design of Damghan Turquoise tree is very close to Neishabour Turquoise.

Goals and vision in DINA DORRI:

DINA DORRI company started its activity from the initial stages and went through the growth stages with effort and patience and increased the number of employees and workers of the complex in order to provide better services and increase its regular customer's day by day.

The most important goal in our company from the beginning until now, is to offer the best, highest quality, highest quality and purest stones from natural mines to customers all over the world at the specified time.

It also improves the quality of products, maintains and sustains customer satisfaction by meeting their needs, expands the current market around the world and provides comprehensive coverage to all applicants for precious and semi-precious stones, including manufacturers of jewelry, decorative things and other consumers.

We anticipate the path ahead for the company:

- Active presence in relevant exhibitions in other countries,
- Creating new development plans in order to achieve the goals,
- More expansion of the collection and more entrepreneurship for active forces,
- The possibility of providing conditions for tourists to visit and tours to visit the mines for those interested in this industry
- Adding more, more diverse products and different and more special use of turquoise in newer goods and items and ornaments

The mentioned items are one of the main axes of the company's mission.

Our services and products:

Our company is engaged in the extraction and supply of various types of Iranian turquoise stones.

Including:

1- Neishabour turquoise

2-Kerman

3-Damghan

The reason for the collection's attention to turquoise stone is that this stone has a lot of energy and healing properties. This natural stone from the heart of the mountain eliminates negative energies and can be used to protect against external influences or pollutants in the atmosphere. Turquoise stone balances and aligns all the chakras of the mind, stabilizes mental fluctuations and induces inner peace.

Great for depression and fatigue, also has the power to prevent panic attacks. It is used to strengthen the circulatory system and strengthen the heart, liver and stomach. It is also used to treat depression, increase self-confidence and strengthen the respiratory system.

At present, mace turquoises in two types of high quality Ajami and Shajari turquoises are extracted from mines all over Iran, and after undergoing the cutting process, as a jewel in colors in a wide range from light blue to green and green, qualities Different and various sizes are sent all over the country and all over the world.

packing:

The priority of "DINADORRI" company is to deliver quality and correct goods to you, dear buyers.

Due to the very high sense of responsibility for trust in sending your package, dear ones, the company fully observes the principles of safety for packaging products.

In this way, the cut stones are first placed in protective cotton, then inside the shock-absorbing plastics, and in the next step, according to the weight and number, they are placed inside the hard boxes designed for the company, all of which are shock-absorbing.

The company's boxes are designed in different sizes and shapes and are suitable for remote posts.

At the end, these boxes are again placed in foam and shock-absorbing plastics in multi-layered protective cartons and covers, and are sent abroad for posting with 100% safety for you friends, thus your package will be free from any damage. Remains safe.

You can see the type of design and packaging of the products in the photos.

You can also suggest the type of packaging you offer to check.

Shipping and delivery methods:

Iran has several air, sea, land and rail borders. Depending on the order quantity as well as the final destination, different ways of sending cargo by feasibility experts. Considering the volume of the order, the method of sending and delivering the cargo may change to some extent.

You can also share the method of receiving your goods with us so that after checking, the result will be announced to you.

Payment methods:

We at the company offer you a cash deposit method. If you have another method for your payment, inform the relevant expert so that it can be checked and at the discretion of the collection management, a final opinion will be announced to you.

About the workshop:

The workshops under the supervision of the group are located in Mashhad and Neishabour, and also the company is in contact with other workshops in Kerman, Damghan and all turning workshops throughout Iran, and provides the turquoise you want. These workshops were initially established on a small scale in the early years of turquoise mining and are still in operation and have a significant annual capacity to cut raw ore.

These workshops are equipped with all advanced machines for correct cutting of stones in the cutting stages. Devices that turn turquoises from raw and natural mace stage to eye-catching jewels with a variety of colors, sizes and textures.

The number of people active in lathe workshops in the country varies depending on the size of the workshops, but usually the number of people in each workshop reaches 10 people who have many years of experience and relevant documents in the field of lathe and work professionally.

Specialists working in the workshops under the supervision of the company, for each workshop in any part of the city, there are 15-20 people who work independently and separately in the workshops.

The wide range and good demand for precious and semi-precious stones led us to increase the number of workshops in the country and by launching several new workshops to collect and cut stones, as well as correct and different packaging throughout Iran. We have also increased the supply in the international markets and facilitated its legal export for our esteemed customers.

About us:

At DINA DORRI, which is now in a special position, we started our activity only with the cooperation of two young workers and from small workshops, and with great perseverance we went through the initial stages and with the passage of time and generation, the number of active workers We have increased the company's expertise and also increased the number of workshops, employees and workers in the complex so that we can provide better services to customers.

We have been able to retain our customers around the world and, thank God, we are now in a good position and are in contact with more miners across Iran, all of whom are experts in this field and for many years in this field and the country's mines. They are active and this trend continues in the company and we intend to increase the number of staff and the level of service day by day.

This complex has 60 years of specialized experience in the field of extraction, cutting and sale of precious and semi-precious stones, and our many years of experience in this complex has caused us to expand it day by day.

Also, the complex has shares in turquoise mines such as Neishabour turquoise, Kerman turquoise and Damghan turquoise and many years of experience in extracting stones from mines, collecting and turning in turquoise turning workshops throughout Iran and

also exporting this product with a package. Export classifications with the aim of expanding and developing working relations with respected merchants of different countries represent the presence.

DINA DORRI company active in the field of Iranian turquoise stones is one of the largest and most reputable companies selling Neishabour turquoise and other Iranian turquoises in Iran and the world because:

- Active members of this company are shareholders of Firoozeh mine and supply Neishabour turquoise directly to the market.
- Any type of turquoise stone you want is available in this company.
- Due to the first category of this company, you can buy turquoise at a lower price.
- The issued identity card guarantees the quality and originality of the turquoise gem you want.

This collection has been able to capture a large share of the export of stone products by gaining the trust of the customer with a special type of packaging in safety and beauty and issuing a certificate for cut stones.

This collection has a history of exporting all kinds of original turquoise stones to foreign countries in its portfolio, therefore it is able to help our dear buyers to export turquoise stones and remove the existing obstacles on the way.

If you are going to buy the best types of turquoise in bulk and you are looking for a reputable company to order and buy, the following collection is one of the best choices. For the necessary information, you can contact the sales manager of the center and ask your questions and ambiguities.

General objectives:

- 1- Increasing the number of active and professional workers in the company and related workshops to increase the level of production.
- 2- Raising the level of quality and quantity of products and services to provide customers' demands.
- 3- Reducing the side costs and the cost price of the stones.
- 4- Expanding the market and developing the supply and production cycle of various products.
- 5- Scientific marketing and creating new markets.
- 6- Establishing company branches in other countries for easier access of customers to the company.
- 7- Attending updates in relevant international exhibitions.
- 8- The possibility of holding tours under the supervision of the complex and in coordination with the company for visitors to the mines.

message from chief executive officer:

In today's world, companies are successful in the field of competition, which has differentiated prominence, creativity and innovation, and considers flexibility in the face of change as part of their business.

DINA DORRI company is a combination of knowledge, expertise, experience to provide quality products and appropriate services to customers

We believe that rocks are full of energy and frequency, and when placed near us and around us, they restore the lost human energy and make people feel positive, and continue to feel positive and good. Everything happens for human beings right and without error and this is where we become unique and prominent.

So our motto in the company is the golden sentence (BE EMINENT).

And we also believe that the development of the company will not be achieved except by relying on capable, positive and expert human resources.

We are proud that now the company's staff at different levels is made up of men and women who have a hardworking and courageous spirit along with accuracy to grow a company.

We believe that by relying on the valuable knowledge and experience of efficient human resources in the collection and by creating empathy and attitude of change, in addition to increasing the supply to meet the needs of the domestic market and export development, we create a quality model unit.

In this regard, striving for customer orientation, improving the quality of services, employee satisfaction and providing benefits to users of the products and services provided, is not a slogan, but a belief for us.

Developing policies to achieve the ultimate goal of the company, which is to create the highest value for customers and gain their maximum satisfaction, is on our agenda. That is why, increasing productivity, continuous improvement, improving knowledge and reducing costs are among the priorities and plans of the company manager.

And we hope that by taking advantage of the valuable comments and suggestions of our valued customers, we can take effective steps towards achieving the predetermined goals. The many years of experience of this company and the experiences gained in recent years have caused any type of product in the field of natural stones to be provided to esteemed buyers according to the company's goals in terms of high quality and quantity. It is worth mentioning that a quarter (1.4) of the company's income is given to Mehrafarin Institute under the management of the great Iranian woman, Ms. Fatemeh Daneshvar, and we are very proud and happy that you also share with us in this charity work. We hope that by relying on God Almighty and the support and perseverance of all hardworking employees, we can play an effective role in the field of production of our beloved homeland.

Organizational structure and management team:

Quality Control:

In order to determine the quality level and details of the stones, we have considered a valid international identity card for each stone and in each dimension, the example of which is given in the picture.

As you can see in the picture, the identity cards of gemstones are analyzed and issued in equipped laboratories based on the knowledge of the most experienced gemologists and stone experts and using the latest and most up-to-date gemology and lithology equipment.

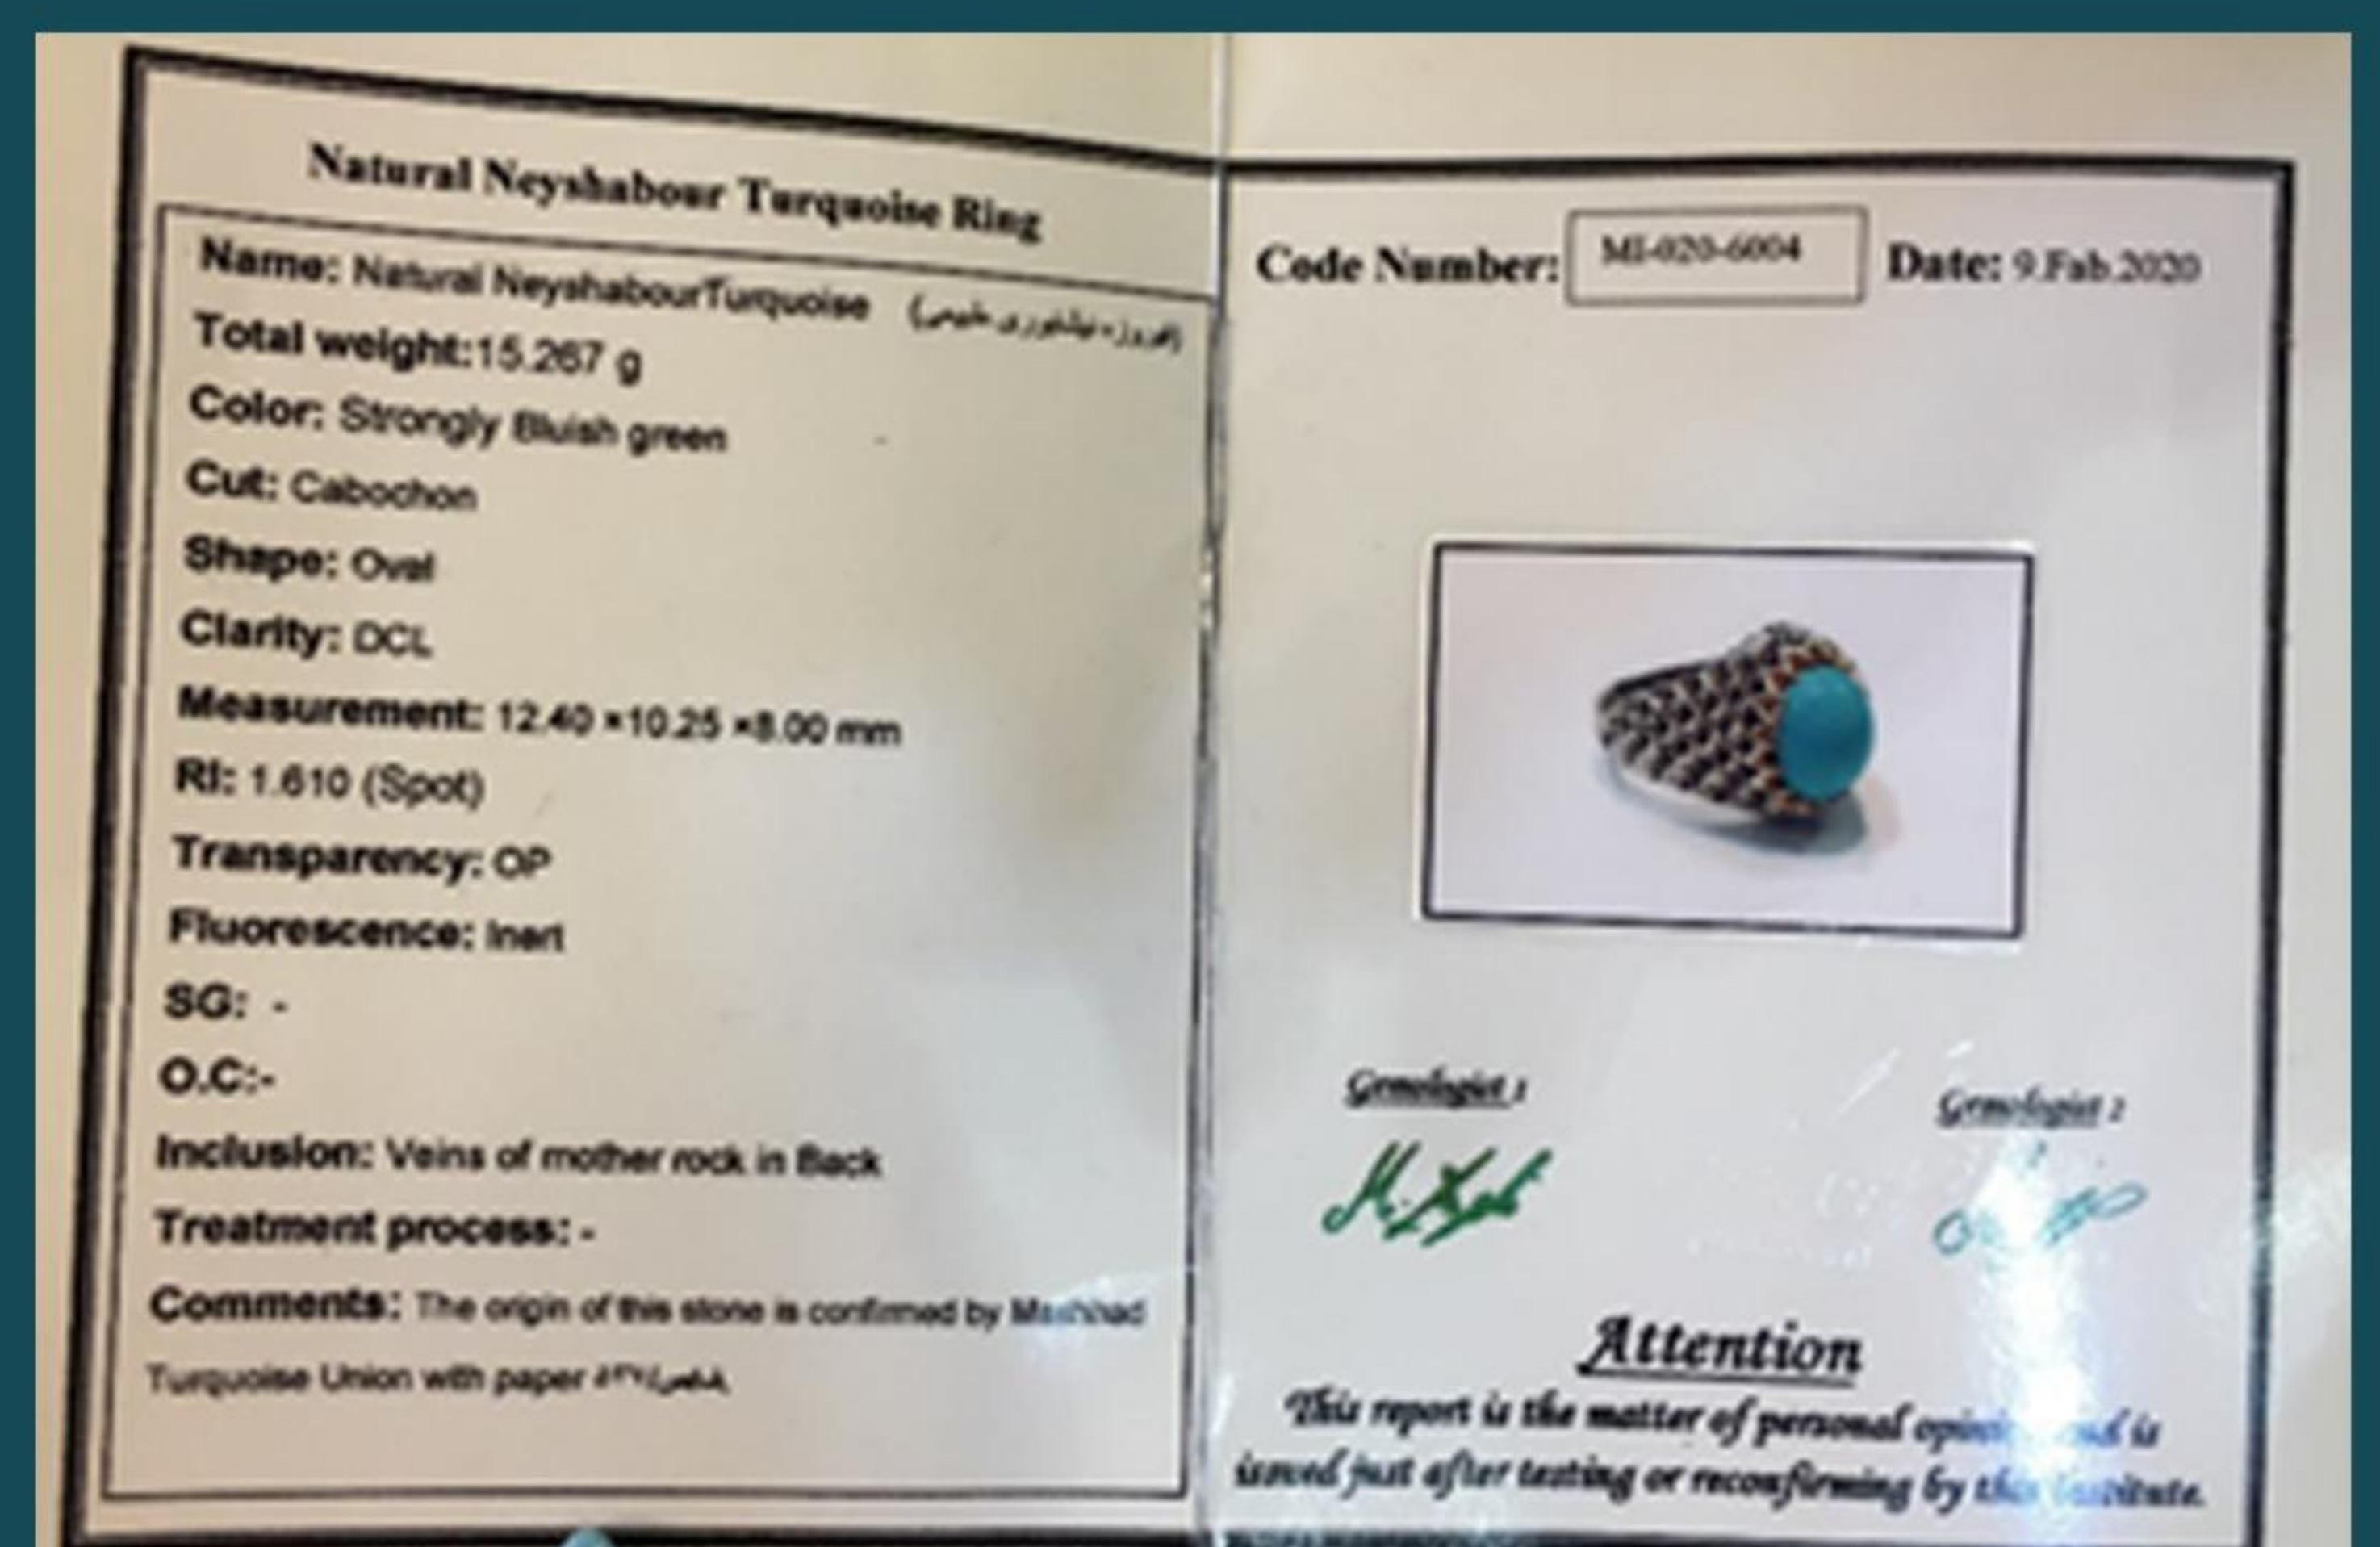

The issued certificate is an expert and accurate report on the identity and quality characteristics of gemstones and precious stones, which makes you buy them with confidence in the quality of the gemstone, its natural or artificial characteristics and its appearance.

The certificate issued by the Association of Gemstone Experts has all the basic factors and parameters that you need to buy the stone.

Among the items mentioned in the certificates, we can mention the name of the stone, weight and heaviness, type of cut, shape, clarity, size, brightness, color, degree of hardness of the stone, ingredients, etc.

Finally, the customized goods are checked by the person in charge of quality control at the time of shipment, and then packaged and handed over to the shipping company for shipment.
